### Trishul Weeder :

Weeding activity is solely performed by farm women with the help of traditional khurpi in squatting and rarely in bending posture throughout the year. It was felt necessary to improve the posture of farm women by developing a new device for weeding. The newly developed device is simple in fabrication, light in weight and easy to operate. It covers double area due to its blades provided at its both sides. The long handle facilitates the weeding by giving pressure by both the hands and it improves the posture.

### *Traditional method of Weeding :*

*Bending*

*Squatting*

### *Specification of Weeder :*

Specificatins	Trishul Weeder
Weight (kg)	1.14
Length (cm)	112
Width (cm)	32
Material Used	Iron
Source	Local artisan
Cost (Rs.)	250 - 00
